Why the Change??

- **Align UJTL with National Guidance**
  - **UJTL/JMETL operationalizes guidance by providing tasks and standards which can be trained to and assessed**
  - **Develops needed skill sets (DOTMLPF)**
  - **Identifies shortfalls feeding the procurement process (ESORTS, DRRS, IPL, JQRR, JROC, FCBs, JCIDS)**

- **Current ST 9.0 is "Coordinate CP in Theater"**
  - **JP 3-40 directs new operational architecture**
  - **CP is now a pillar of CbtWMD along with NP and CM**

- **NMS further defines CbtWMD using 4 Military Strategic Options and 8 Military Mission Areas**

- **BOTTOM LINE – if the UJTL is not aligned or nonexistent nothing else works smoothly**

Strategic Framework

Ends

Strategic Goal: Through prevention, deterrence and decisive operational capability, the US, its forces, allies and interests are neither threatened nor attacked by WMD

Existing WMD is secure and the US is engaged to reduce it. WMD is not produced, but if produced, it is detected, characterized and elimination sought. WMD and related materials proliferation is prevented, defeated or reversed. If WMD is employed, US forces are capable of minimizing its effects in order to continue operations in a WMD environment, attributing the source of attack, and responding decisively to prevent and/or deter future attacks.

Ways

Nonproliferation | **Counterproliferation** | **Consequence Management**

Prevent, deter, or deny proliferation of WMD/related material

Military Strategic Objectives

Military Missions

Security and Partner Activities | **Interdiction**

Reverse, reduce and eliminate existing WMD

Threat Reduction Cooperation | **Elimination**

Defeat WMD use

Offensive Operations | **Active Defense**

Protect, respond and recover from WMD attack

Passive Defense | **nsequence Management**

Strategic Enablers

Intelligence, Strategic Communication, Research & Development, Strengthened International Cooperation, Targeted Strategies against Proliferators & Terrorists, Force Projection

Means **Combatant Commands, Services, and Combat Support Agencies**

The Proposal

- ST 9 Coordinate Combating WMD in Theater
  - ST 9.1 Integrate, Synchronize and/or Conduct Security Cooperation and Partner Activities
  - ST 9.2 Coordinate Threat Reduction Cooperation in Theater
  - ST 9.3 Integrate, Synchronize and/or Conduct WMD Interdiction in Theater
  - **ST 9.4 Integrate, Synchronize, and/or Conduct WMD Elimination in Theater**
  - **ST 9.5 Coordinate CbtWMD Offensive Operations in Theater**
  - **ST 9.6 Coordinate Active CBRNE Defense in Theater**
  - **ST 9.7 Establish Passive CBRNE Defense in Theater**
  - **ST 9.8 Coordinate Consequence Management (CM) and Foreign Consequence Management (FCM) in Theater**

What to Do??

- **Strategic and operational plans are being written NOW**
  - **Offers unique opportunity to sync emerging plans with UJTL early in the process**
  - **CDR USSTRATCOM designated as DoD Lead COCOM for CbtWMD – agrees with UJTL rewrite (planner level)**
  - **Write tasks and measures conducive to mission assessment (opposed to readiness assessment)**

- **USCENTCOM / USSTRATCOM currently performing UJTL analysis and proposed rewrite**
  - **Matching all current ULTLs to 8 CbtWMD mission areas**
  - **Identifying “holes” and devising tasks to fill**

- **UJTL Team support the change**

- **Review proposal during July USCENTCOM CbtWMD Conference**

Questions?

Backups

The Proposal

- **ST 9 Coordinate Combating WMD in Theater**
  - **To take actions at the theater level to ensure that the United States, its Armed Forces, allies, partners, and interests are neither coerced nor attacked by enemies using WMD. Activities include all actions taken to defeat and deter WMD use and subsequent use; protect, respond and recover from WMD use; defend, dissuade or deny WMD proliferation or possession; and to reduce, destroy or reverse WMD possession. DOD activities should be integrated with the activities of other U.S. government departments/ agencies and allies and partners across the full CbtWMD spectrum of nonproliferation, counterproliferation, and consequence management. Consideration must also be given to potentially hazardous toxic industrial chemicals and toxic industrial materials.**

The Proposal

- **ST 9.1 Integrate, Synchronize and/or Conduct Security Cooperation and Partner Activities**
  - **To prevent, dissuade, or deny enemy access to WMD-relevant capabilities while promoting partnership capacity to combat WMD. Develop and/or integrate cooperative activities with regional military partners to foster common WMD threat awareness, coalition building, and interoperability. Support implementation of treaties, agreements, sanctions, export control regimes & frameworks and other national, international, and host-nation WMD nonproliferation programs.**

The Proposal

- **ST 9.2 Coordinate Threat Reduction Cooperation in Theater**
  - **In support of DOD and other government agency's efforts to enhance partner/allied WMD physical security, emplace detection equipment; and reduce, dismantle, redirect, and/or improve protection of a State's existing WMD programs, stockpiles, and capabilities. Ensure theater security cooperation plans and security measures are consistent with threat reduction initiatives.**

The Proposal

- **ST 9.3 Integrate, Synchronize and/or Conduct WMD Interdiction in Theater**
  - **To stop the transit of WMD, delivery systems, associated and dual-use technologies, materials, and expertise between States of concern and to State or non-State enemies. Integrate and synchronize the WMD interdiction efforts of other U.S. Government departments and agencies as well as those of partner/allied States. Plan to conduct U.S. Military WMD interdiction operations in permissive and non-permissive environments.**

The Proposal

- **ST 9.4 Integrate, Synchronize, and/or Conduct WMD Elimination in Theater**
  - **To systematically locate, characterize, secure, disable, and/or destroy enemies' WMD programs and related capabilities in hostile or uncertain environments.**

- **ST 9.5 Coordinate CbtWMD Offensive Operations in Theater**
  - **To positively identify and select CBRNE weapon targets such as acquisition, weaponization, facility preparation, production, infrastructure, exportation, deployment and delivery systems. Match the means (lethal or nonlethal), conduct the attack, and assess damages to include any consequences from collateral damage.**

The Proposal

- **ST 9.6 Coordinate Active CBRNE Defense in Theater**
  - **To defend and protect theater forces and means from attack from conventionally or unconventionally delivered WMD using kinetic and/or non-kinetic means. Includes special operations forces (SOF), aircraft, interceptor missiles, air defense artillery, nonair defense weapons in an air defense role, and electronic attack. Protects critical nodes and facilities particularly APODs and SPODs. This is a joint and multinational task involving the coordination and synchronization of all available theater assets that integrates with passive defense procedures to optimize force protection measures. Provides connectivity through C2 systems that provide tactical warning and assessments. Active defenses are measures taken to detect, divert or destroy enemy CBRNE weapons and delivery means while enroute to their targets.**

The Proposal

- **ST 9.7 Establish Passive CBRNE Defense in Theater**
  - **To minimize or negate the vulnerability to, and the effects of, WMD use against the military forces, interests, installations, and critical infrastructure of the U.S. and its partners/allies. This includes medical surveillance, networking detectors, providing positive identification and characterization of the weapon, warning and reporting of WMD CBRNE incident hazards, individual and collective protection, and decontamination as necessary. Prophylactic and casualty treatment regimes are included. This task involves both threat reductions by denial of advantage and the implementation of readiness measures. In addition, CBRNE threat and countermeasures training to deploying personnel and issuing of disease and NBC countermeasures such as vaccines, prophylaxis and postexposure countermeasures will be conducted. A predetermination of theater AE assets and procedures will be provided in conjunction with bed down actions. Medical surveillance, assessment and reporting programs will be established and conducted. If required, NBC casualty estimates and recognition, identification and diagnoses pertaining to CBNRE agents will be provided.**

The Proposal

- **ST 9.8 Coordinate Consequence Management (CM) and Foreign Consequence Management (FCM) in Theater**
  - **To reduce the effects of a WMD attack or event, including Toxic Industrial Chemicals (TIC) and Toxic Industrial Materials (TIM), and to assist partner nation/allies in the restoration of essential operations and services. Identify, resource, and tailor forces for CM, to provide initial response and to serve as the C2 element for all DOD support in the theater. Task includes establishing liaison with necessary government agencies, regional NGOs, international organizations, and regional military commands that contribute resources to CM operations. CM may occur during military operations, be required in support of friends or allies (FCM), or as part of DSCA within CONUS.**
